

# RxMen Discovery Call Copilot

## Red Flags Checklist

**Purpose:** List of symptoms/conditions requiring immediate medical escalation (NOT standard discovery call)

**Instructions:**

Please review and:

1.  Confirm each red flag is correct
2.  Inform the action for each
3.  Add any missing red flags
4.  Modify actions if incorrect
5.  Add notes if needed for specific cases

---

20	<b>Rapid unexplained weight loss</b>	"Bahut wajan ghat gaya bina wajah ke"	Escalate - could indicate systemic illness, physician referral needed	

## NOTES SECTION (Add Context)

Add any important notes here:

Example:

- "If user had heart attack >6 months ago AND has cardiologist clearance → can proceed normally"
  - "Nitrate medications: Specifically ask about nitroglycerin, isosorbide, etc."
  - [Add your notes]
-

# HOW AI WILL USE THIS

## During Discovery Call:

1. Agent fills form with user's symptoms/history
2. AI scans responses against this red flag list
3. If match found → AI immediately alerts agent:
  -  "RED FLAG DETECTED: [Condition]"
  - "ACTION: [What to do]"
  - "DO NOT proceed with standard root cause analysis"

## Agent then:

- Follows the action specified
- Escalates to appropriate doctor/department
- Does NOT give any treatment advice
